Summary

Product-minded engineer with 4+ years shipping software. At EcoQuick I proposed and launched the pricing, tracking and dispatch features the founder adopted; at TCS I owned a module on a 30M+ policy platform.

Education

University of Leicester — Leicester, UK
MSc Advanced Computer Science – Distinction — *Sept 2024 – Jan 2026*

Goa University — Goa, India
BE Computer Engineering – University Gold Medalist — *Aug 2016 – Aug 2020*

Experience

EcoQuick — Remote, UK
Freelance Product Engineer – eco-courier startup — *Apr 2026 – Present*

- Took a two-sided delivery marketplace from idea to a live product with the founder, replacing a fully manual booking and dispatch process with online booking, Stripe payments and self-serve job claiming; now onboarding first customers and drivers.
- Proposed upfront dynamic pricing, live order tracking and a driver job-claim system so customers knew the cost and status of every order and drivers could choose their own jobs; the founder adopted all three as core features.
- Modelled the order lifecycle as one shared state model (pending → assigned → picked up → in transit → delivered) to end confusion between founder, drivers and code over what each status meant, giving every feature a single reference.
- Spotted that two drivers could accept the same job and made job claims atomic before launch, removing a double-booking risk that would have hit customer trust.

Samko Holdings — Remote, UK
Product & Data Consultant (Freelance) — *Feb 2026 – Mar 2026*

- Replaced 5 people's manual month-end reporting with automated syncs across QuickBooks, Coupler.io, Excel and Power Automate, after leadership interviews showed the process was always late.
- Shipped a live KPI dashboard, validated with its users, so leadership could track operations in one place.

Tata Consultancy Services — Mumbai, India
Systems Engineer – Insurance (BFSI) domain — *Oct 2020 – Aug 2024*

- Owned the Accounts Module end to end on an insurance platform managing 30M+ policies, turning business-analyst documents into development tasks and refining requirements in grooming so releases matched business needs; cut query time 60% and defect recurrence 70% at 99.9% uptime.
- Led the IE-to-Chrome migration with a core team of 3, coordinating 10+ engineers and triaging 400+ defects by user impact to move users off a retiring browser; closed nearly all defects and earned the On the Spot Team Award.
- Diagnosed a policy-PDF bug that had blocked users for 1.5 years, fixing it within a week and unblocking go-live.
- Stepped into the Corporate Policies team during personnel changes, supporting new product development and costing change requests with business analysts to keep delivery on track; recognised with Star of the Month.

Products Built

AI Slide Enhancer | *Generative AI product, MSc dissertation* — Distinction

- Framed, scoped and built an AI tool that improves presentation slides, deciding which steps the AI owns and which the user controls so people keep ownership of their content; iterated on user-test findings.
- Added Gemini as a fallback behind OpenAI so the product stayed usable through outages and rate limits.

MoneyMap | *AI personal finance app* — GitHub

- Designed a cashflow app because my bank offers no API or transaction alerts, so I couldn't analyse my own spending; it turns CSV and PDF statements into a dashboard with plain-language insights.
- Scoped a lean v1 (statement import, chat to add facts, dashboard) and deferred bank connectors and a multi-agent AI crew until the core loop works; kept every number in deterministic SQL so the AI never invents figures.

Skills & Awards

Product: User interviews, PRDs, user stories, roadmapping, prioritisation (RICE, MoSCoW), MVP scoping, KPIs, Jira
AI: LLM product design, prompt engineering, model fallback, output evaluation, agentic workflows, MCP
AI Build Tools: Claude Code, Cursor, Bolt, Replit
Technical & Data: Python, .NET (C#), C++, TypeScript, SQL, REST APIs, PostgreSQL, Stripe, Power Automate
Domains: Insurance (BFSI), Fintech & Payments, Logistics & Delivery
Awards: Star of the Month (2x), Star Team, On the Spot Team, Special Initiative (2x) – TCS
